

SITENAV

HYDRO 3D

Your 3D solution for the maintenance, development, rehabilitation, and preservation of all wetlands: coastlines, lakes, canals, port areas, ponds, and rivers.

Benefits of the **HYDRO 3D SITENAV** Module

- 1 Real-time tracking:** Monitor and trace your marine machine's movements in real time, with automatic reporting of activities such as cleaning, inspection, and rehabilitation.

- 2 Flexibility & compatibility:** Easily geolocate underwater networks with our wireless 3D solution, which can also be integrated into your construction equipment.

KEY FEATURES OF OUR 3D SOLUTIONS

Quick installation and configuration (less than half a day)

GTR and GPS traceability

RTK georeferencing in any coordinate system

Clear and intuitive interface

Remote connected maintenance

COMPATIBLE WITH:

- ✓ Amphibious excavators
- ✓ Submerged sensor or clamshell bucket option

IDEAL FOR:

- ✓ Underwater rockfill management
- ✓ Horizontal and/or vertical 3D polyline tracking for ditch cleaning
- ✓ Geolocation of underwater pipes
- ✓ Underwater site management
- ✓ Seawater applications
- ✓ Automated and customizable reporting
